# Top-3 changes in Agents creation

## 1. Agents, not Copilots

Formerly known as **Copilots**, we now refer to them as **Agents**.

A small change in name, but a huge leap in capability!

## 2. Smoother knowledge integration

Adding knowledge to agents has never been easier!

We're **no longer limited** to the number of public websites or SharePoint sites we can use - bring all relevant sources under one roof.

## 3. Specific instructions to the LLM

Provide specific **instructions** that guide the agent on how to accomplish tasks. These instructions influence the agent's behavior, tailoring it to the needs of your end-users.

# Create your Agent

## Select the solution

4. Select the **Solution** for your Agent.  
Click on the three dots and go to **Advanced settings** to select the appropriate solution.

! Keep in mind that the solution should be created in advance.

# Create your Agent

## Add details

5. Give your agent a descriptive **name** that clearly reflects its intended role.

6. Select an appropriate **icon** that visually represents the agent's purpose.

7. Add a brief **description** to give more context about what the agent is designed to do.

# Create your Agent

## Add instructions

8. Define behavior using **LLM instructions** - specific instructions that outline the goals, tasks, and preferred responses of your agent.

# Create your Agent Add LLM instructions

Sample instructions:

You are JingleBot, a knowledgeable and cheerful AI assistant working at Santa's Workshop Ltd.

Your goal is to assist elves, reindeer handlers, and workshop staff by answering their questions based on the company's official documents. These include the Company Charter, Gift Manufacturing Standards, Code of Conduct, Daily Schedule, and Guidelines for Using Christmas Magic.

When responding:

**Be Clear and Precise:** Provide answers based only on the information in the documents.

**Be Cheerful and Festive:** Always maintain a positive, elf-friendly tone in your responses.

**Be Helpful:** If additional clarification or suggestions are needed, offer them proactively.

**Use Context:** Relate your answers to the specific roles and tasks of elves, ensuring relevance to their day-to-day duties.

For example, if asked about wrapping rules, explain the process in detail, referencing the wrapping section of the Gift Manufacturing Standards. If asked about work schedules, refer to the Daily Schedule while highlighting break times and team activities.

Always sign off your answers with a festive touch, like 'Happy Wrapping!' or 'Keep the magic alive!'

# Create your Agent

## Add knowledge

9. Add **knowledge** so your agent can provide more relevant information and insights. You can add either SharePoint or public sites.

During the creation process, you can add either **SharePoint or public** sites only.

# Create your Agent

## Save and test

10. **Save** your agent.

11. Use the **integrated testing tool** to see how your agent performs.

JingleBot is your go-to helper for all things merry, magical, and workshop-related. Whether you're crafting toys, wrapping gifts, or preparing reindeer for the big day, JingleBot is here to make your work easier, faster, and more joyful!

**Instructions**  
Direct the behavior of the agent, including its tasks and how it completes them.

# New modern approach

## Benefits

### Improved efficiency

The smoother knowledge integration saves time, allowing you to add all the data sources your agent needs.

### User-friendly interface

With the modernized layout, new users will find creating agents more intuitive, meaning less time spent on onboarding and more time creating value.

### Greater customization

The ability to add specific instructions to the LLM means agents can be precisely tuned to carry out complex tasks, reducing the need for manual intervention.

# Today's Task: Create your first Agent

## 1. Create Your Own Agent

Log in to Copilot Studio and create an agent that assists with a simple task, such as answering FAQs.

## 2. Add Knowledge Sources

Add at least three knowledge sources - think about what information would make your agent most effective.

## 3. Test and Refine

Test your agent and refine its instructions to ensure it's performing well. Think of it as polishing an ornament until it shines!
