Custom agent in Canvas app

Why is it important?

Copilot Studio agents allow you to bring conversational AI into your Power Apps Canvas apps.

With agents, users get immediate, contextual support right inside your app, improving the overall experience:

- It makes your app more **intuitive** and **user-friendly**.
- **Reduces** manual work for users.
- Brings the power of AI right into your app for a **seamless** experience.

Agent in Canvas app

Prepare your agent

Create your agent in Microsoft Copilot Studio.
Ensure the agent is properly configured and publish it.

Agent in Canvas app

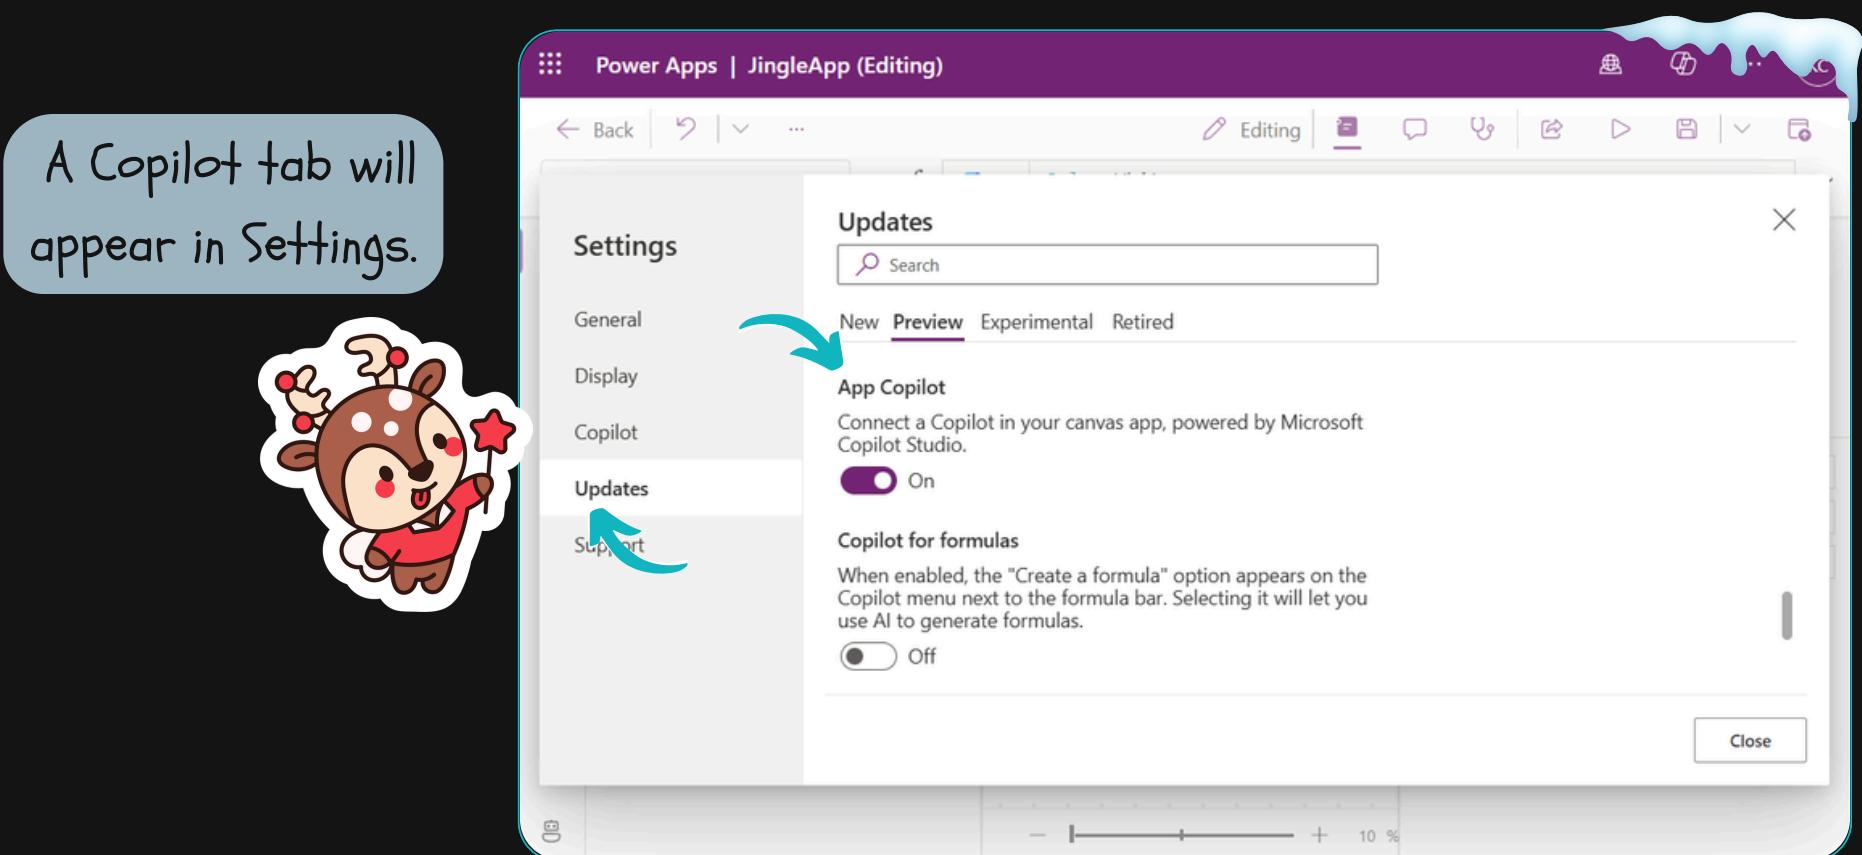

Add agent to the app

Navigate to the Maker portal <https://make.powerapps.com>.

Create or find your target app and open it for **editing**.

Go to **Settings** and open **Updates** tab.

Enable the toggle for **App Copilot** under the **Preview** tab.

Agent in Canvas app

Add agent to the app

Under the **Copilot** tab, select your custom **agent** from the drop-down list.

Ensure the agent is published and shared in the same environment as your app.

Agent in Canvas app

Test the app on mobile

Test it directly in
the Power Apps mobile application,
rather than using the Studio preview mode.

Custom agent in Canvas app

Benefits

Enhanced user engagement

Users can interact naturally with your app, improving their experience.

Increased productivity

Automates tasks and provides quick answers, saving time.

Streamlined support

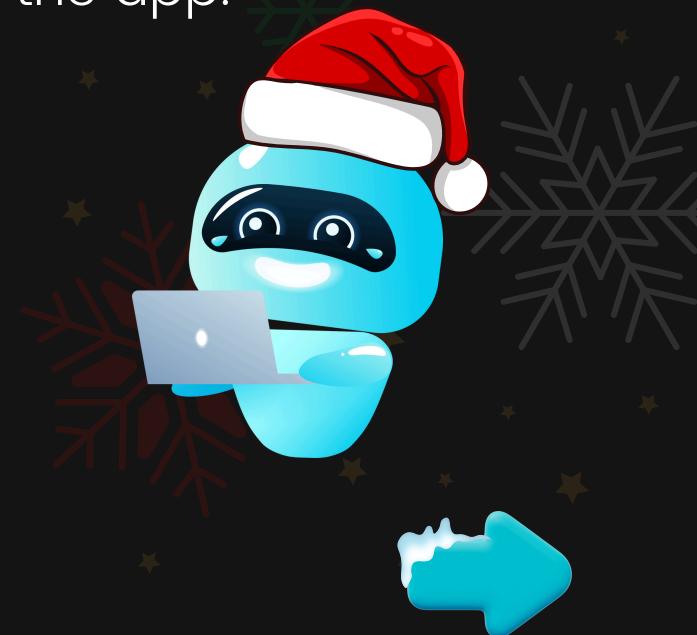

Users receive real-time guidance without leaving the app.

Customizable experience

Design and train your agent to meet your business-specific needs.

Today's Task: Add a custom agent to a Power Apps Canvas app

1. Create and publish an Agent

Go to Copilot Studio, create a simple agent, and publish it.

2. Add the Agent to a Canvas App

Follow the steps to insert the agent into a Canvas App you've built.

3. Test and customize

Test how the agent interacts with users and refine its responses.
